

Service Bulletin 031209UK

To prevent burst caused by metal fatigue improves Ahcon the safety level of Aluminium Pressure Vessels used at Truck Safety inflating cages

According to improved safety regulations valid for Aluminium Pressure vessels and in order to guarantee the proper function of our jet systems used in Truck Safety inflating cages we recommend strongly to install a Pressure limitation device. This will limit the pressure in the Jet systems to 9 bar g.

In addition we remind you to the temperature limits wherein the Aluminium pressure vessel can be used. This is restricted to an area of - 10° C up to + 50° C.

The necessary Pressure limitation device incl. Installation instruction is available free of charge. Ahcon will not carry any Installation costs. These have to be covered on customers side.

Please announce serial No. or Invoice No. for orders.

Important:

In case to not follow up this recommendation Ahcon will not be liable neither for direct nor indirect damages or injuries caused by male function of the Aluminium pressure vessel used in Truck Safety inflating cages.

Due to safety reasons Ahcon recommends to replace the Aluminium vessels after 17.000 times of use, or latest after 10 years.

In case of questions pls. call +45 76 15 21 50 or E-Mail bme@ahcon.dk
